FIG. 1 — System Architecture (100)

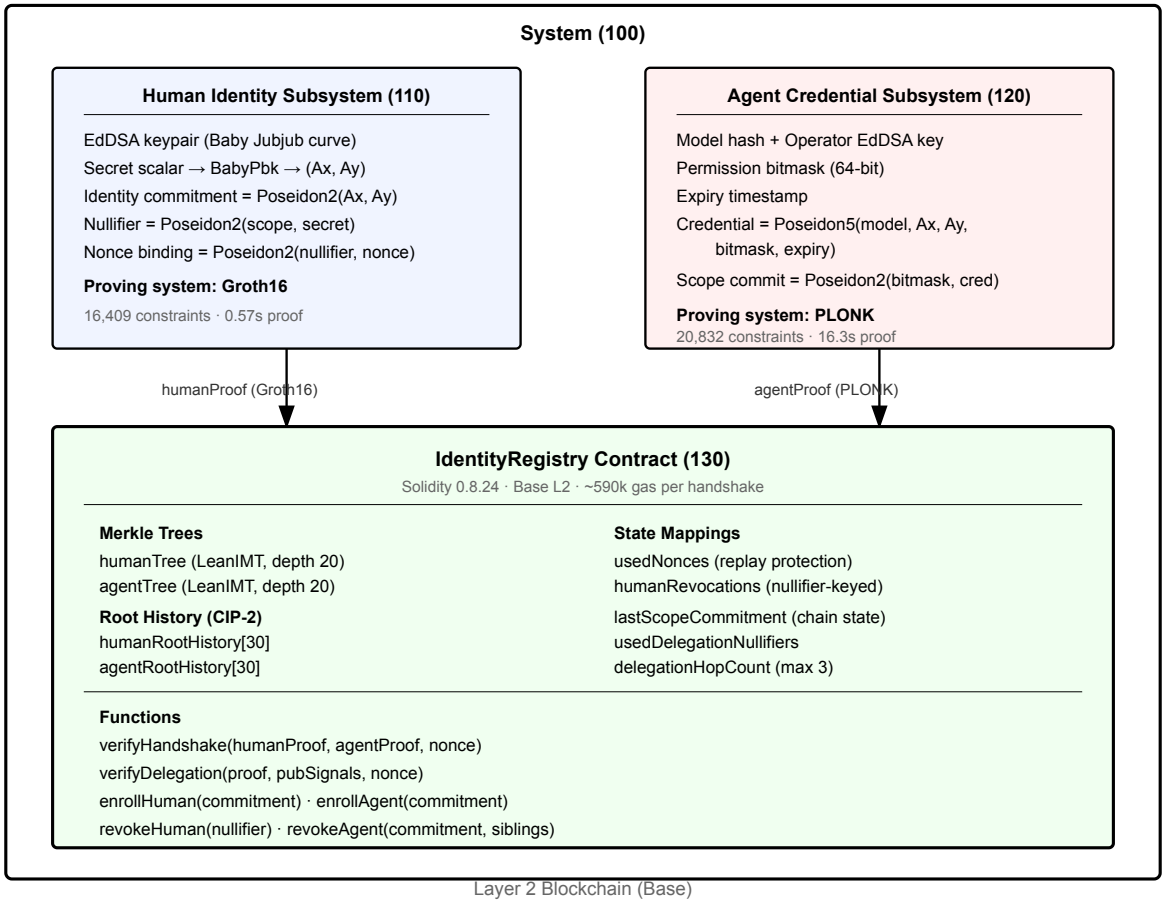

FIG. 2 — HumanUniqueness Circuit (200)

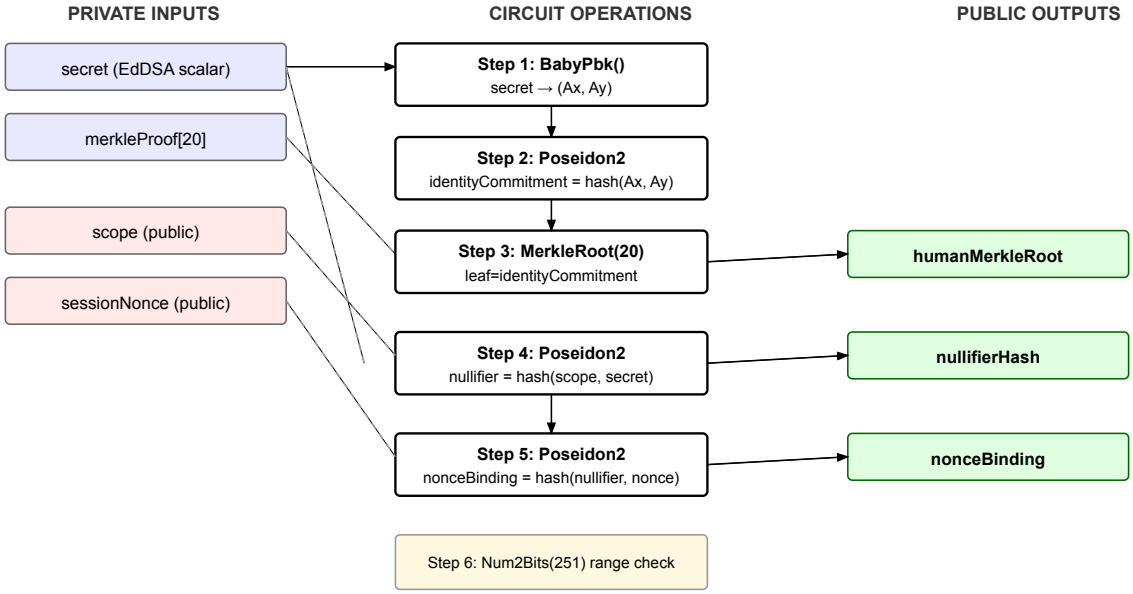
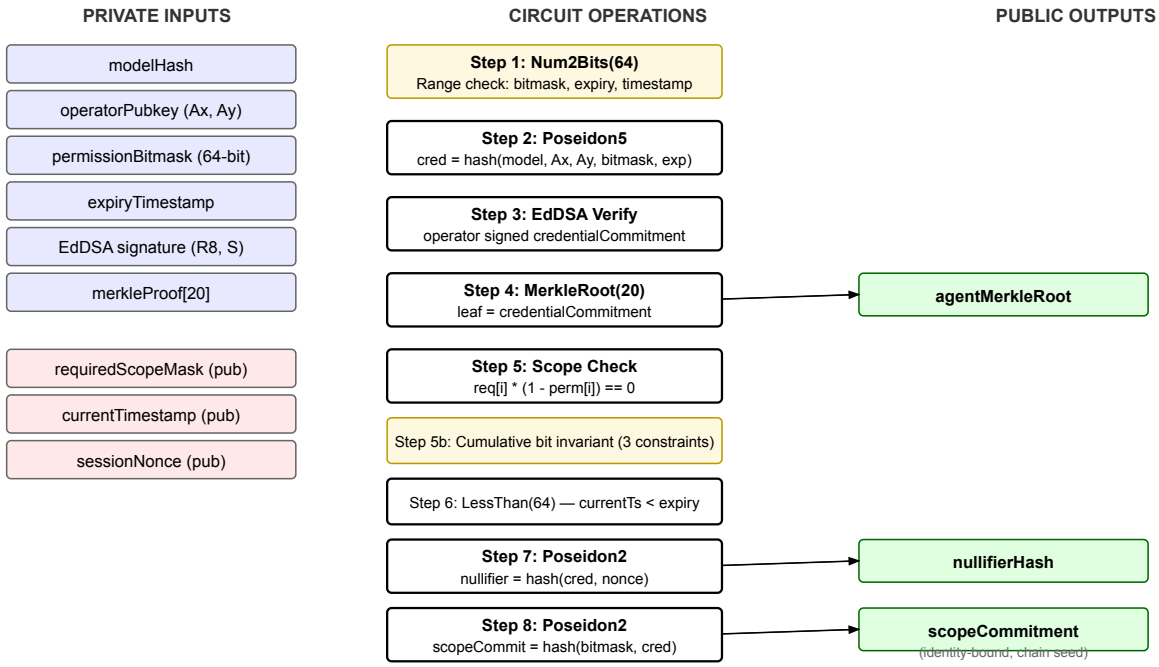


16,409 R1CS constraints · Groth16 · 0.57s proof · 722 bytes

Compatible with Semaphore v4 identity scheme (EdDSA on Baby Jubjub)

FIG. 3 — AgentPolicy Circuit (300)



20,832 R1CS constraints · PLONK · 16.3s proof · 2,098 bytes

Cumulative bit encoding: bit 4 → bits 2+3 · bit 3 → bit 2

FIG. 4 — Mutual Handshake Protocol (400)

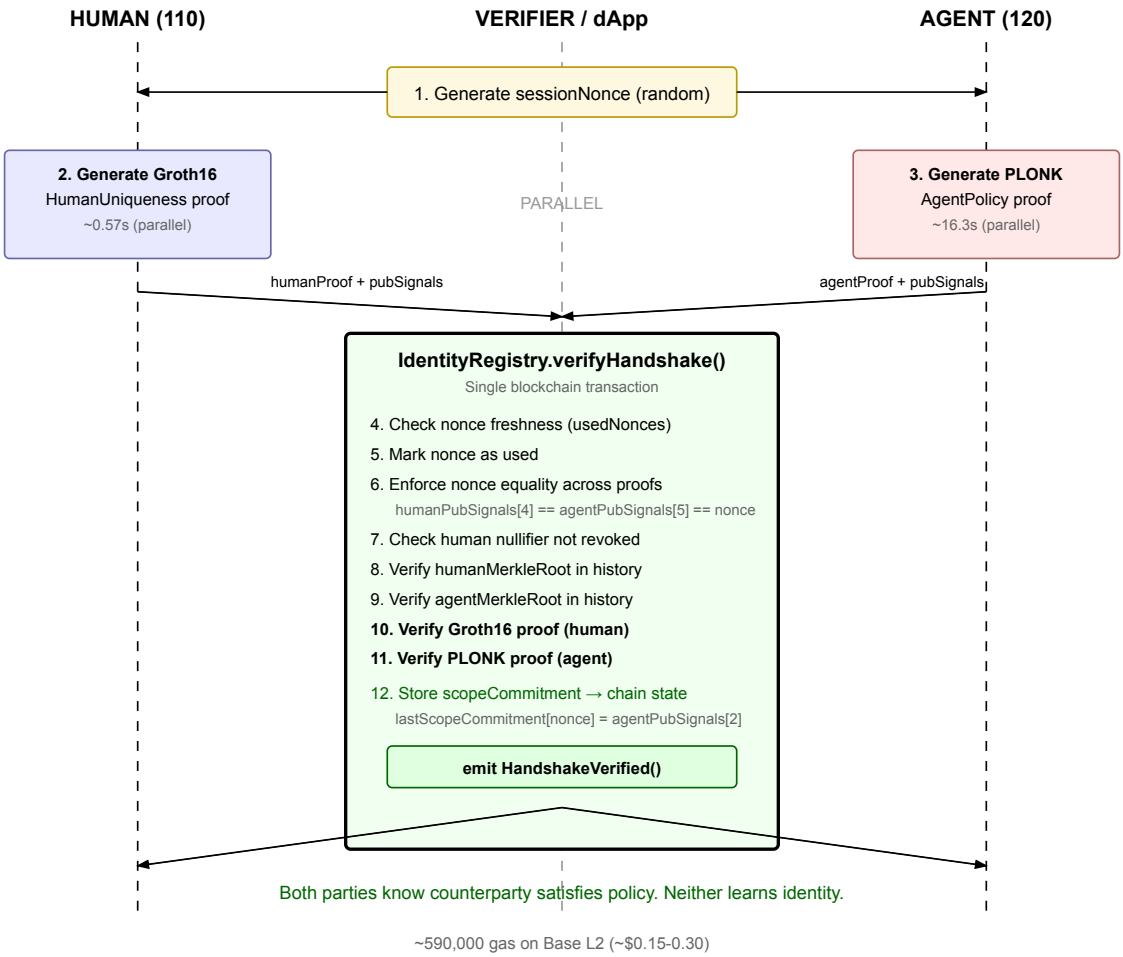


FIG. 5 — Delegation Chain with Identity-Bound Scope Commitment Linking (500)

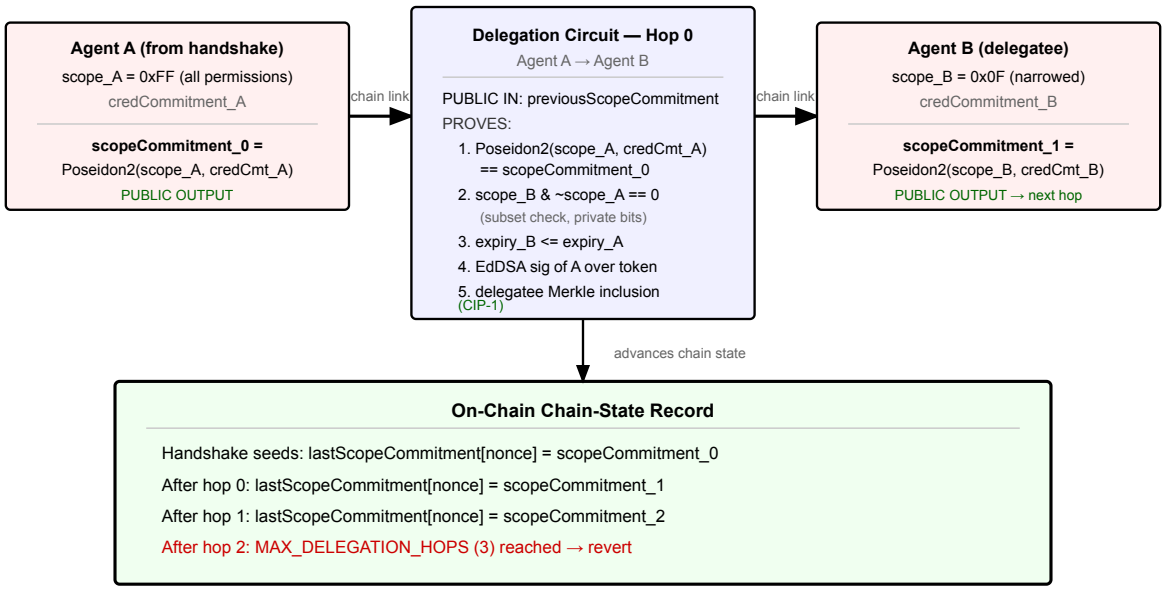

Privacy: scope bits are PRIVATE inputs. Only Poseidon2(scope, credCommitment) is PUBLIC.
Identity-bound: prevents impersonation — an actor with same bits but different credential fails.
